

DryJect Aeration

The only machine in the world that injects high volumes of dry material

Enviro Tech Soil Solutions, Inc. has extensive experience and a proven track record of improving soils by aerating and injecting AXIS into golf courses, sports fields, commercial and residential properties. Aeration service through EnviroTech Soil Solutions, Inc. is typically done on a square footage basis. Hourly or daily rates are available for custom treatments of isolated areas. "Water only" injections for summer stress relief are offered at a discount.

The **DryJect** is a high water pressure aerifier and much more. The DryJect can install liquid or granular materials into the root zone of turf areas, right where you want it. With the DryJect, you can inject AXIS in amounts necessary to substantially change the soil, improve the soil's ability to resist compaction, improve drainage, conserve water and increase the soil's aerobic capacity.

How it works

Connected to a typical water supply, the water is pressurized up to 3000 psi. A quick, controlled blast of water delivers the material into the ground to the desired depth. The net effect is that you are actually cutting and filling aeration holes simultaneously. This process is totally safe for sprinkler heads and irrigation lines, as nothing but water and product enter the ground.

Aerate, amend and topdress — play in one hour on a smooth surface

Using only one operator, the DryJect can be used often enough to quickly modify your soils. You can easily inject from 50 to over 150 pounds of AXIS per thousand square feet, ensuring greater infiltration, reducing compaction, and creating a better air and water balance, while increasing available water.

Golf courses and country clubs find that the DryJect works amazingly well, and greens are playable *immediately*. There is minimal surface disruption, and much quicker heal time, play resumes quickly after aeration, thus improving your revenue opportunities.

Unlike traditional aeration, where optimum coring occurs only at an ideal soil moisture, this equipment is unaffected by inclement weather.

Give us a call to arrange a demonstration. See for yourself how this equipment can benefit your soils management program. DryJect equipment can also be purchased or leased-to-own.
