

AXIS Sponsors Energy & Water Conservation Effort

Front Yard

Back Yard

Provo Energy Smart Homes - Provo, UT

Energy efficient features were built into the interior of a demonstration home. The effort was joined by the Central Utah Water Conservation District and Landscape Architect Jeremy Filmore of Northland Design Group to add water conservation features outdoors where 60% of all urban water use occurs. 6 Tons of AXIS were donated by EP Minerals and EnviroTech and included in all the soil on the landscape to conserve water in all planter areas and the lawn areas at 15% by volume.
